AMBIENTALI

Mediterranean Islands and Climate Change - the case of Malta

The lecture starts with a broad definition of climate change and the projections envisaged in the latest research. It contextualizes the impacts in the Mediterranean, especially for the islands of Malta. It presents some of the current state of affairs in terms of the islands' international obligations to reduce emissions, as well as sectoral implications of climate change in the coming years. The lecture aims to show the importance of sectoral research in supporting climate change decision-making.

Relatore:

Maria Attard

Professor, head of Geography and Director of the Institute for Climate Change and Sustainable Development at the University of Malta. She is specialized in urban transport, policy and project implementation.
